

Patch Notes – Mar. 30, 2020

Issues Addressed

- A bug introduced by the most recent GEHRIMED release prevented GEHRIMED Administrator users from creating or editing a Facility with a duplicate external ID. Users were presented with a pop-up that could not be cleared alerting them to the duplicate external ID. This error has been corrected, and users may now create/edit facilities in GEHRIMED.
- A bug introduced by the most recent GEHRIMED release caused some users to inadvertently lose access to the Delete Encounter functionality in the options menu. This issue has been corrected and intended user access has been restored.
