

Patch Notes – Mar. 03, 2019

Issues Addressed

- A GEHRIMED bug allowed multiple PointClickCare interface records to be associated with a GEHRIMED patient. GEHRIMED will now use only the most recently associated PointClickCare Facility to push encounters for a patient.
- The verbiage of the PointClickCare Login status warning has been updated to better communicate to users that the encounter will remain pending until they verify their credentials:
