Patch Notes – August 12, 2021

Issues Addressed

- Performance enhancements for Windows speech recognition have been implemented.
- After a previous release, the default field selection for Create Encounter changed to Facility rather than Encounter Template. The previous behavior has been restored. Encounter Template is once again the default selection so that the template can be chosen quickly from the pick list or by using up and down arrow keys to start an encounter.
- For providers who require a co-signer, if no co-signer was selected before attempting to sign an encounter, a "Please wait, loading…" spinner was shown and could not be resolved. This has been corrected.
